This office action is in response to applicants' communication filed on 12/1/08.

The FINALITY of the rejection filed on 7/28/08 is hereby withdrawn, and following office action is in order.

Claims 20-21, 23-26, and 31-39 are pending in this application.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 20-21, 23-26 and 31-37 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-26 of U.S.

Patent No. 7,238,638 or claims 1-21 of U. S. 7,202,192. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims of the above patent teach similar process of making alkylhalosilanes as claimed in herein The difference between the references and herein claimed process is that the reference is

particular about the ratio between beta 2 and beta 3, which is obvious from the instant specification and above patent specification. Thus one of ordinary skill in the art would arrive at the claimed process using the prior art of record, with the reasonable expectation of achieving a successful process of obtaining silanes, absent evidence to the contrary.
